

SANJI-INU WHITE PAPER

THE FAMOUS CHEF IN THE PIRATE WORLD HAS APPEARED!

SANJI INU

WHO ARE SANJI?

"Blackfoot" Sanji, born Vinsmoke Sanji, is the chef of the Straw Hat Pirates. He is the fifth member of the crew and the fourth to join the Straw Hat Pirates.

Born as the third son and fourth child of the Vinsmoke Family (thus making him a former prince of the Germa Kingdom), he disowned his family twice, once in his youth and again after reuniting with them as an adult. After fleeing the Vinsmokes as a child, he eventually entered the care of Zeff as the sous chef of the Baratie, where he would remain until he met Monkey D. Luffy, who convinced him to join his crew.

His dream is to find the rumored chef's paradise, All Blue, which is where East Blue, West Blue, North Blue, and South Blue meet, along with their wildlife. He is one of the top three fighters of the Straw Hats, alongside Luffy and Zoro.

INTRODUCTION TO SANJI-INU TOKEN

Sanji-Inu is a charity driven token which strives to help those who cannot help themselves. Different Cryptocurrencies arrived at the moon but without a purpose, we are determined to follow in Shiba's steps whilst putting smiles on the faces of those who are less fortunate and of course our token holders. The Sanji-Inu will keep contributing to achieve designed holder milestones by making marketing efforts, thus making sure Sanji-Inu is on track. Also, liquidity will be locked for one years preventing the coin from collapsing. Furthermore, tokenomics design which incorporates transaction taxes will keep building the price floor. Sanji-Inu is decentralized and well-liked by its lively community. We accept and support different viewpoints in order to develop Sanji-Inu into the greatest crypto community. Every transaction automatically contributes to the locked liquidity pool strengthening the Sanji-Inu token. Sanji-Inu is a token that helps those who cannot help themselves. The Sanji-Inu has decided the worldwide Traveling With Inu, aligns with our views on who will bring the most value out of the donations made by our holders. A 2% 'redistribution fee' for every purchase made existing holders will receive Sanji-Inu Tokens.

Sanji-Inu is based on BSC and our contract address has been verified on BSC scan. Binance Smart Chain dual-chain architecture will empower its users to build their decentralized apps and digital assets on one blockchain and take advantage of the fast trading to exchange on the other. Binance Smart Chain is a new platform that aims to lower transaction costs and provide a space to create DApps and other DeFi products. Binance Smart Chain (BSC) is a blockchain network built for running smart contract-based applications. BSC runs in parallel with Binance's native Binance Chain (BC), which allows users to get the best of both worlds: the high transaction capacity of BC and the smart contract functionality of BSC. While it runs in parallel with BC, Binance Smart Chain is a

standalone blockchain. This means that even if BC stops operating, BSC will continue to run its technical and business functions. Smart contracts, which are Ethereum-compatible, are supported by BSC. Through this feature, developers can build or migrate DApps, tools and other ecosystem components on the BSC network without much friction. The aim of the platform is to enable developers to build decentralized applications (DApps) and help users manage their digital assets cross-chain with low latency and large capacity. Binance Smart Chain has made immense traction in early 2021 so far partly thanks to Ethereum's congestion and gas fee issues, which has caused developers and staking investors to look for other options. The BSC community made the network even more appealing to new users as a cost-effective and stable alternative, by lowering its gas fee from 15 Gwei to 10 Gwei to counter Binance Coin (BNB)'s insane price jump to over \$300 in February.

BENEFITS OF SANJI-INU

Cryptocurrencies, combined with blockchain technology, have positively impacted the charitable organizations around the world. A crypto token, such as the charity-oriented token, helps charities raise wealth for countless individuals who need it for their survival, health, education and well-being. Donation systems that revolve around cryptocurrencies allow donors to keep a track of where their funds are going and the people that are receiving the help through the charities.

This transparency ensures that funds are being put to better uses and that support is offered to those who really need it. A charity-oriented token allows for a more decentralized approach, that generates a much higher amount of funds when compared to the conventional methods. Sanji-Inu is a token that helps those who cannot help themselves. The Sanji-Inu has decided the worldwide Traveling With Inu, aligns with our views on who will bring the most value out of the donations made by our holders. A 2% 'redistribution fee' for every purchase made existing holders will receive Sanji-Inu Tokens. Sanji-Inu provide transparency and fairness to the community. Sanji-Inu offers benefits for everyone.

SANJI INU

PANCAKESWAP

PancakeSwap is a decentralized exchange on Binance Smart Chain, one of Ethereum's top competitors. Binance Smart Chain blockchain is the creation of Binance, a centralized crypto exchange known for being the largest in the world. With PancakeSwap, Binance is essentially competing against two distinct cryptocurrency establishments of Ethereum and Uniswap.

The intrigue gets even deeper because PancakeSwap can outshine Binance itself if exchange volume gets deep enough. However, cryptocurrency narratives aside, PancakeSwap is one of today's largest DeFi protocols. PancakeSwap uses an automated market maker (AMM) model. That means that while you can trade digital assets on the platform, there isn't an order book where you're matched with someone else. Instead, you trade against a liquidity pool. Those pools are filled with other users' funds. They deposit them into the pool, receiving liquidity provider (or LP) tokens in return. They can use those tokens to reclaim their share, plus a portion of the trading fees.

BUYING \$SANJI

Buying Sanji-Inu is simple and it can be done in few easy steps. Sanji-Inu has already been listed on Pancakeswap and other cryptocurrency exchanges. Follow these simple steps to buy Sanji-Inu tokens.

SANJI INU

ROADMAP

STAGE 1

- Attracting more than 1,000 holders
- White Paper 1.0 Release
- 2,000 Telegram members
- Coinecko listing
- Coinmarketcap listing
- Contract Audit

STAGE 2

- 10,000 holders
- Marketing campaign (Socials: Youtube, Twitter, Facebook, Instagram, Tiktok)
- Attract 20,000 Telegram followers
- Marketplace website integration
- Market Cap Stable Above 50 million
- First Vote to Donate to Charities

STAGE 3

- 40,000 holders
- Listed Sanji token on small and medium exchanges
- New partnership
- Preparing to list on major exchanges
- Big Marketing Push (i.e BTOK Ads)
- Update ON Trustwallet

STAGE 4

- Interview on TV and Radio
- Create NFT
- Big Marketing Push (i.e BTOK Ads)
- Update ON Trustwallet
- Android/iOs wallet with built-on marketplace
- Update Moonmap new version

SANJI INU

KEY FEATURES OF SANJI-INU

Some key features of Sanji-Inu are:

- Secured and safe: Sanji-Inu leverages a distributed peer-to-peer consensus network that cryptographically helps in securing every transaction.
- Quick transfer: Instant fund transfer globally is available with the help of fast block execution unlike traditional remittance, unmatched speed, and payment processors.
- Decentralized: Direct transactions among network participants without the presence of a central facilitator are enabled with the help of decentralized technology.
- Easy to use: User-friendly interface intended for seamless Realworld use cases.
- Scalability: Assures scalability for pacing up with the industry's transaction requirements, thereby facilitating mass adoption of cryptocurrency.

SANJI INU

RISKS

Sanji-Inu provides a lot of benefits to the investors, but on the other hand, it is not out of risk. At Sanji-Inu, our team believes that we should be transparent and declare the potential risks involved in Sanji-Inu. Like any other crypto coin out there in the market, Sanji-Inu is also volatile. We cannot control it. The market value of Sanji-Inu solely depends upon the number of people who buy it or sell it. As of now, Sanji-Inu cannot be mined or earned any other way than bought., it has to see a lot of improvement in the coming days. The market value of Sanji-Inu may be highly volatile at the start, but we can guarantee that it will become stable over time. We don't want it to be unstable. We don't want it to be the next USDT either, with no volatility. Besides these risks, if one is an expert in trading crypto or using it, they can time the market, buy the Sanji-Inu, hold it, wait till its value becomes high, and sell it.

The blockchain industry is in the initial stage of its regulation. Governments of countries are in the process of studying blockchain technology, and some countries impose restrictions (for example, the United States, China, South Korea). No legal documents are regulating the crypto industry yet - the laws can appear later and can significantly affect the activities of blockchain projects, including our project. We warn you that such laws can significantly limit and even stop the project activity, we are not responsible for the negative consequences associated with the possible regulation of the industry in the future.
